

# Bitwise operator review:

```
uint8_t last4(uint8_t n) {
    return 0b00001111 & n;
}
```

$$\begin{array}{r} \text{bitmask mask} \\ 00001111 \\ \& 10101100 \\ \hline 00001100 \end{array}$$

$$\text{last4}(0b10101100) \Rightarrow \underline{0b00001100}$$

$$\text{last4}(0b10100000) \Rightarrow \underline{0b00000000}$$

```
uint8_t last4(uint8_t n) {
    return 0b00001111 & n;
}
```

}

```
uint8_t combine(uint8_t a, uint8_t b) {
    return (last4(a) << 4) | last4(b);
}
```

}

$$\text{combine}(0b10101111, 0b11000011) \Rightarrow \underline{\hspace{2cm}}$$

$$(\text{last4}(0b10101111) \ll 4) \mid \text{last4}(0b11000011)$$

$$(0b00001111 \ll 4) \mid \text{last4}(0b11000011)$$

$$0b11110000 \mid \text{last4}(0b11000011)$$

$$0b11110000 \mid 0b00000011$$

$$0b11110011$$

# Signed vs. unsigned numbers

4-bit numbers (2's comp)

|      | unsigned | signed |
|------|----------|--------|
| 0000 | 0        | 0      |
| 0001 | 1        | 1      |
| 0010 | 2        | 2      |
| 0011 | 3        | 3      |
| 0100 | 4        | 4      |
| 0101 | 5        | 5      |
| 0110 | 6        | 6      |
| 0111 | 7        | 7      |
| 1000 | 8        | -8     |
| 1001 | 9        | -7     |
| 1010 | 10       | -6     |
| 1011 | 11       | -5     |
| 1100 | 12       | -4     |
| 1101 | 13       | -3     |
| 1110 | 14       | -2     |
| 1111 | 15       | -1     |

uint8\_t

uint32\_t

unsigned

int8\_t

int32\_t

signed

int

$$abcd \quad \left. \begin{array}{l} \\ \end{array} \right\} \text{unsigned interpretation}$$

$$a*8 + b*4 + c*2 + d*1$$

$$a*-8 + b*4 + c*2 + d*1 \quad \left. \begin{array}{l} \\ \end{array} \right\} \text{signed interp}$$

Every bit pattern can be interpreted as signed or unsigned.

We use code (types, etc) to tell C which operations to use.

%u vs %d  
(unsigned) (signed)
